AT A BIG SAVING

**TO PLANT ROSES IN THE FALL** Follow simple directions in picture and you will succeed with our hardy roses and enjoy an abundance of bloom. A well drained soil is essential. With heavy soils adequate drainage should be provided. Plant below the bud or where branches start. This is usually about 2 inches deeper than they grow in the nursery row. After planting, mound up about 6 inches high around top of plant. Cut off top of rose bushes 1 or 2 inches above top of mound. Remove mound of soil in late spring when new growth has started and danger of frost is past. Fall planting assures an abundance of blooms early next spring and we like fall planting where plants are protected in preference to spring planting. Plant roses in bed 18 to 24 inches apart in alternate rows. Water well when planting.
